Hello everyone

and welcome to a new Laco Video.

Today we would like to present you the Laco Augsburg with dial Type A and the Aachen with dial Type B in grey. Both watches are available with a diameter of 39 mm and 42 mm.

Here you can see both sizes in a direct comparison side by side. The 42 mm Version on the left and the 39 mm Version on the right. The Type A has eleven arabic numerals, the pilots triangle with two dots instead of the 12 and thermally blued hands. You can appreciate this when gently tilting the watch back and forth.

The case remains true to the other basic models. we have the rounded lugs a grippy crown with brushes stainless steel.

As with all our Laco watches we also use Saphir crystal here. Witch we can provide with anti reflective coating on both sides as the customers request. Through the Saphir crystal case back we can see the Laco S2 movement with is based on the Miyota 82S0 with a 48 hour power reserve. The movement can be upgraded to the Laco 31 based on the Miyota 80315 with has a power reserve over 60 hours and thermally blued screws.

We will now show the watches on a wrist. Here you can see the 39 Augsburg with a grey leather strap on a wrist circumference 17,5 cm. The strap is made of calfskin and has the typical pilot watch rivets and here the Aachen with a 42 mm diameter and a dial in the style of Type B also with the leather strap with rivets as well as the pin buckle with Laco Logo engraved on it.

music

The watches can also be read clearly and precisely at night. At night the watches glow light blue. The reason for this is that we use superluminova bgw9 instead of the superluminova c3 luminous material used in the other basic pilot watches. The luminous material is pure white during the day, and light blue or turquoise at night.

In addition to the leather straps the watches are also available with a stainless steal bracelet. Here you can see a three linked stainless steal bracelet with the same brushed finish as the case. It can easily be combined to achieve a sporty look. The clasp we are using is made out of solid stainless steal this is particularly visible on the side. It is a folding clasp with a safety bar and a Laco Logo.To open the clasp you first lift the safety bar and then press the two pushers on the sides. Here you can see the 42 mm Version on a 17,5 cm wrist circumference.

music

The 39 mm Version is also available with a metal bracelet. Just like the before with brushed stainless steal, three links with a gradient 18 to 16 mm this may seem a little narrow to some people but it fits in proportion to the lager models.

In edition to the safety clasp and the two pushers the clasp includes a fine adjustment with a total of six holes to customize the bracelet using a corresponding tool.

Finally you can see the 39 mm Version here please let us know your wrist circumference when ordering so that we can customize the strap for you in advance. There you have them the 39 and the 42 mm Augsburg and Aachen in grey if you like to find out more about the basic models please take a look at our Talk about them. Which is linked in the top corner if you have any questions please ask them in the comments. Thank you for watching. bye and see you next time.
